

Backend Architecture Flowcharts

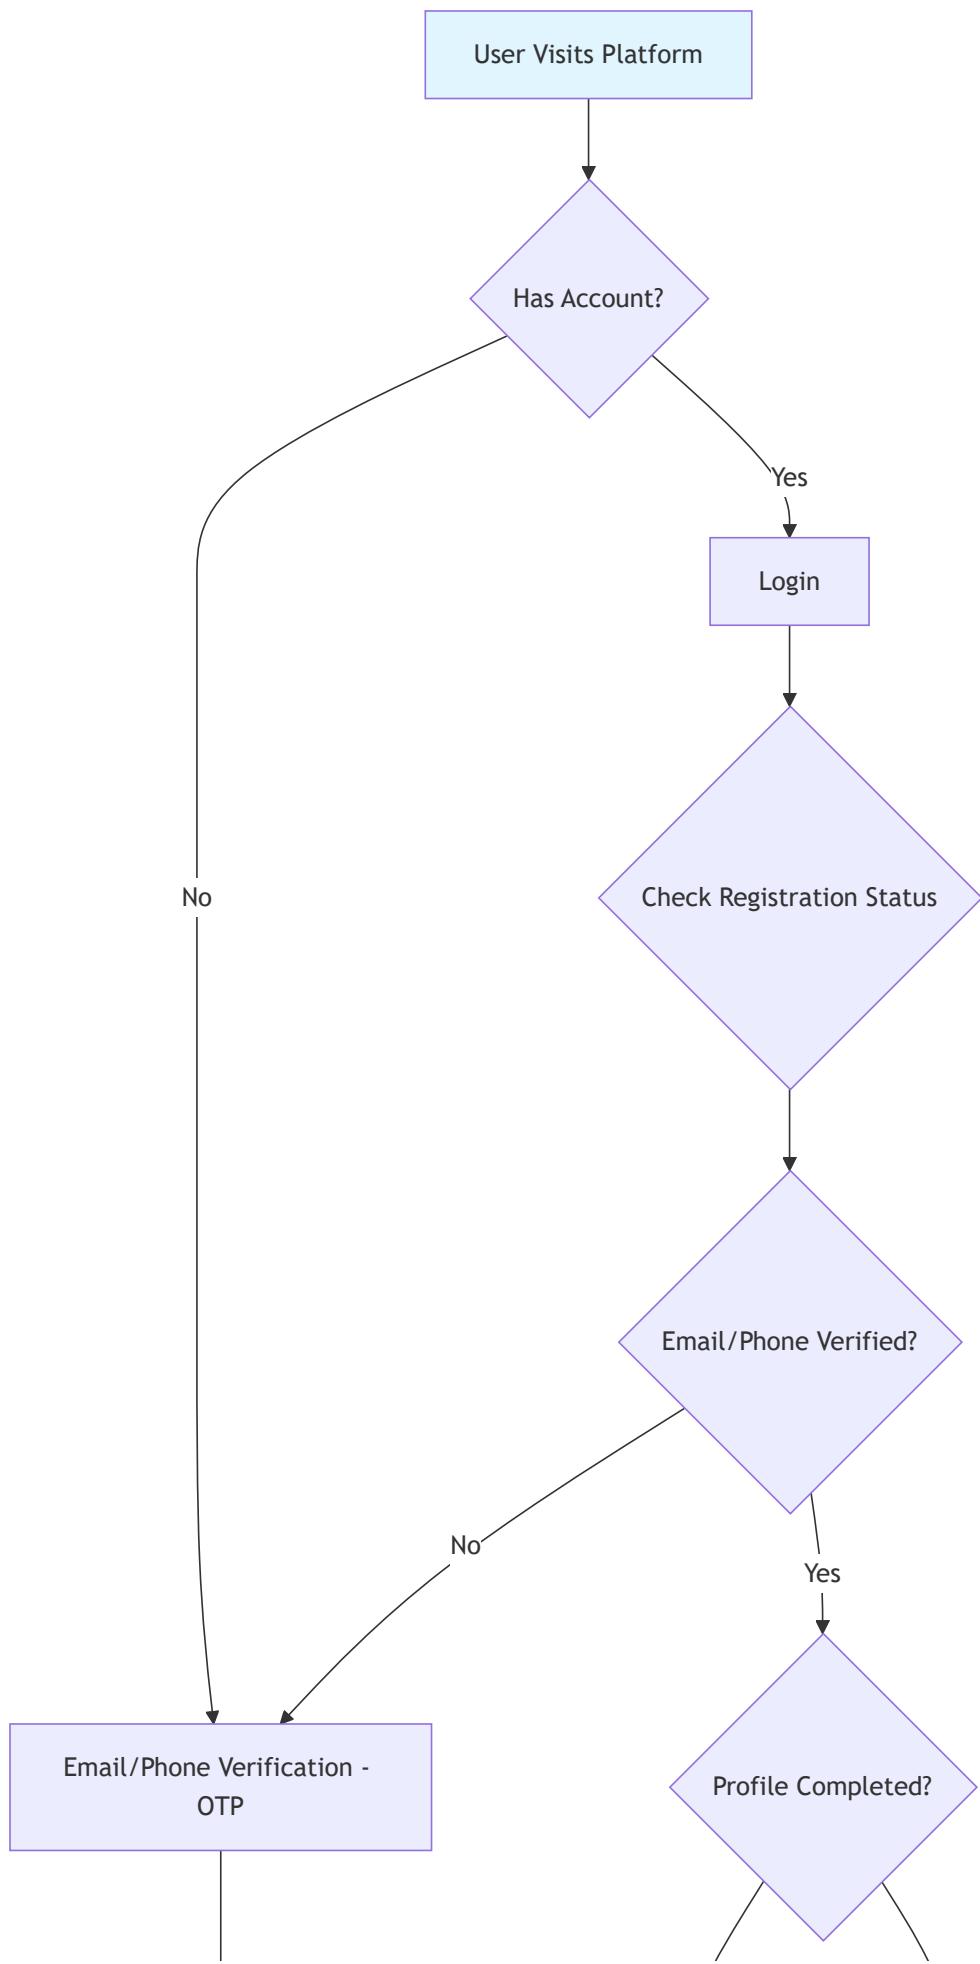

1. Backend System Architecture

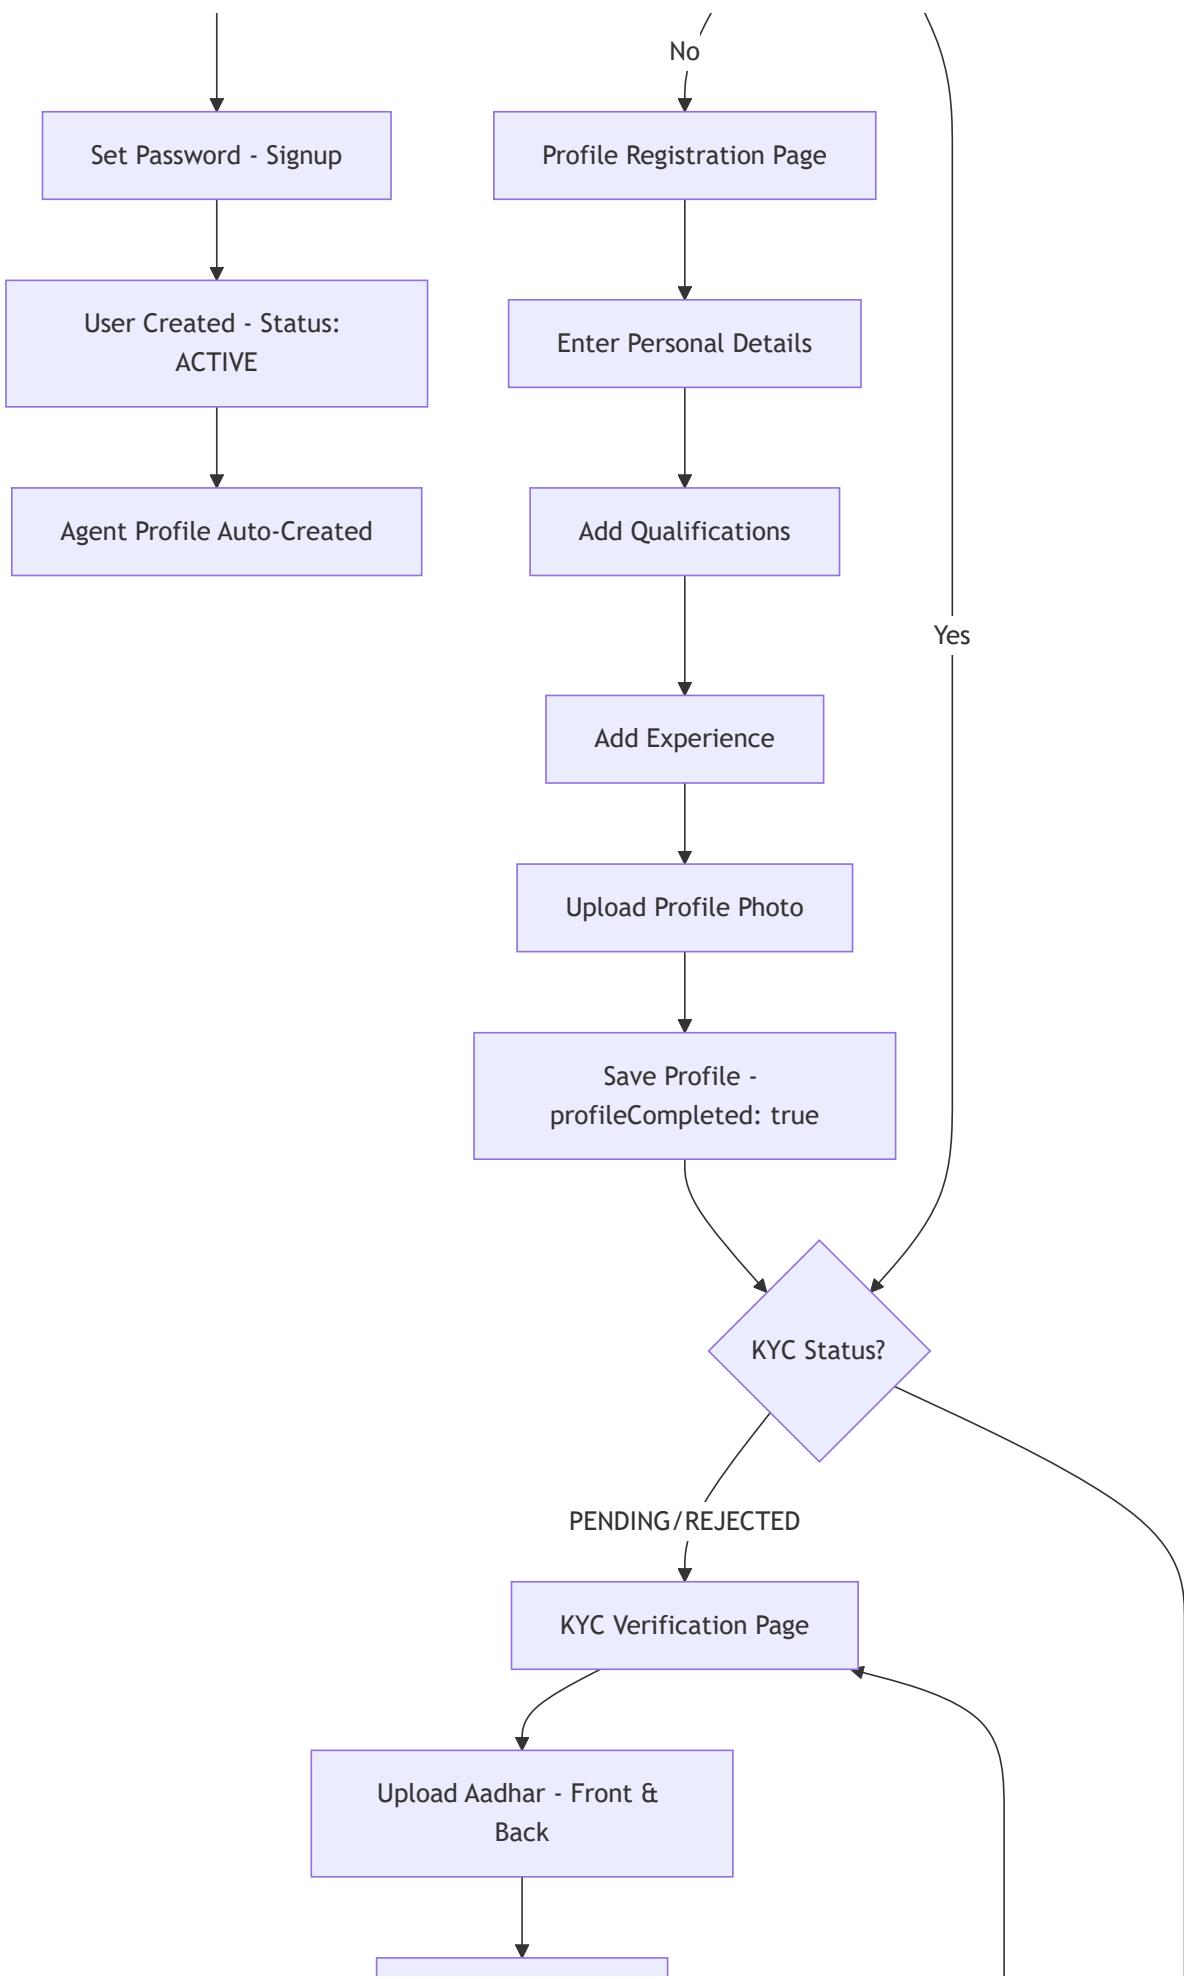

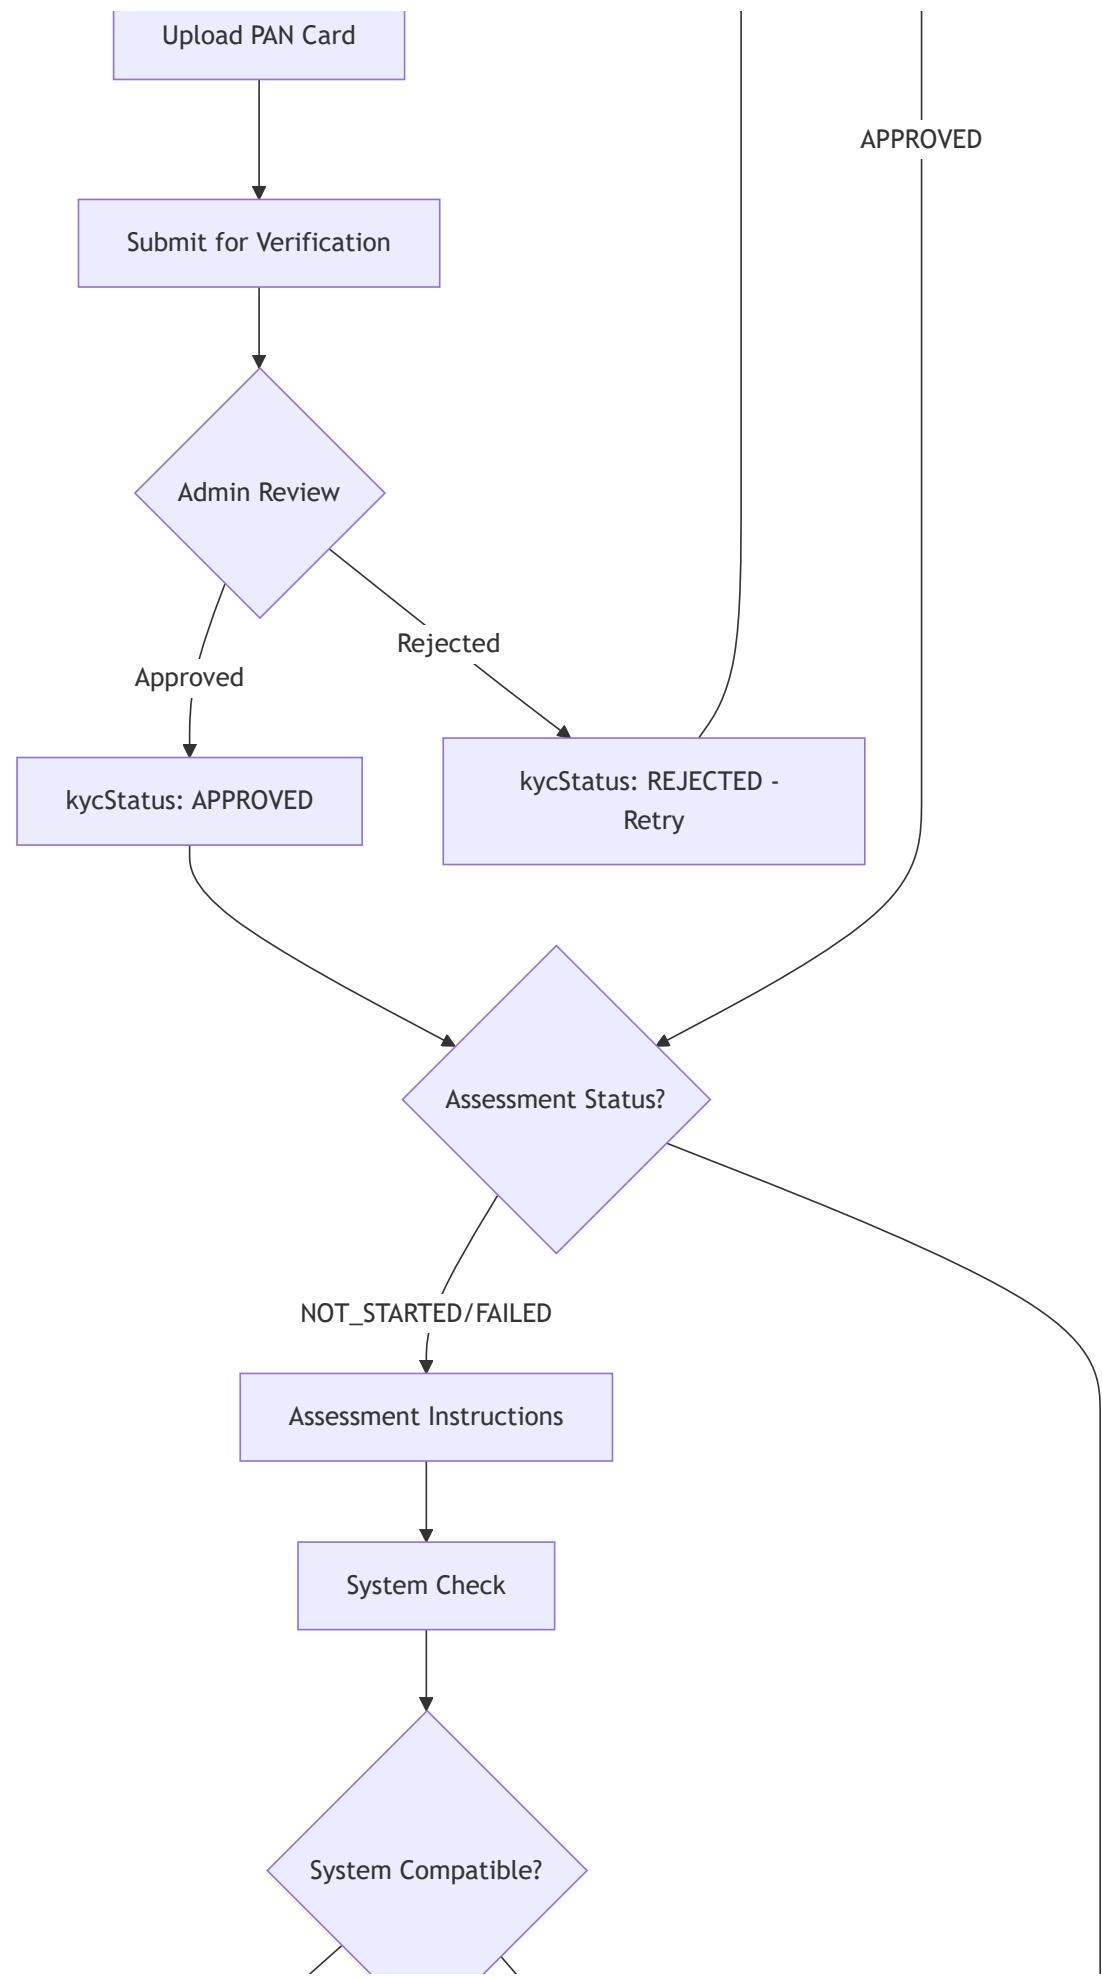

2. Authentication Flow - Signup & Login

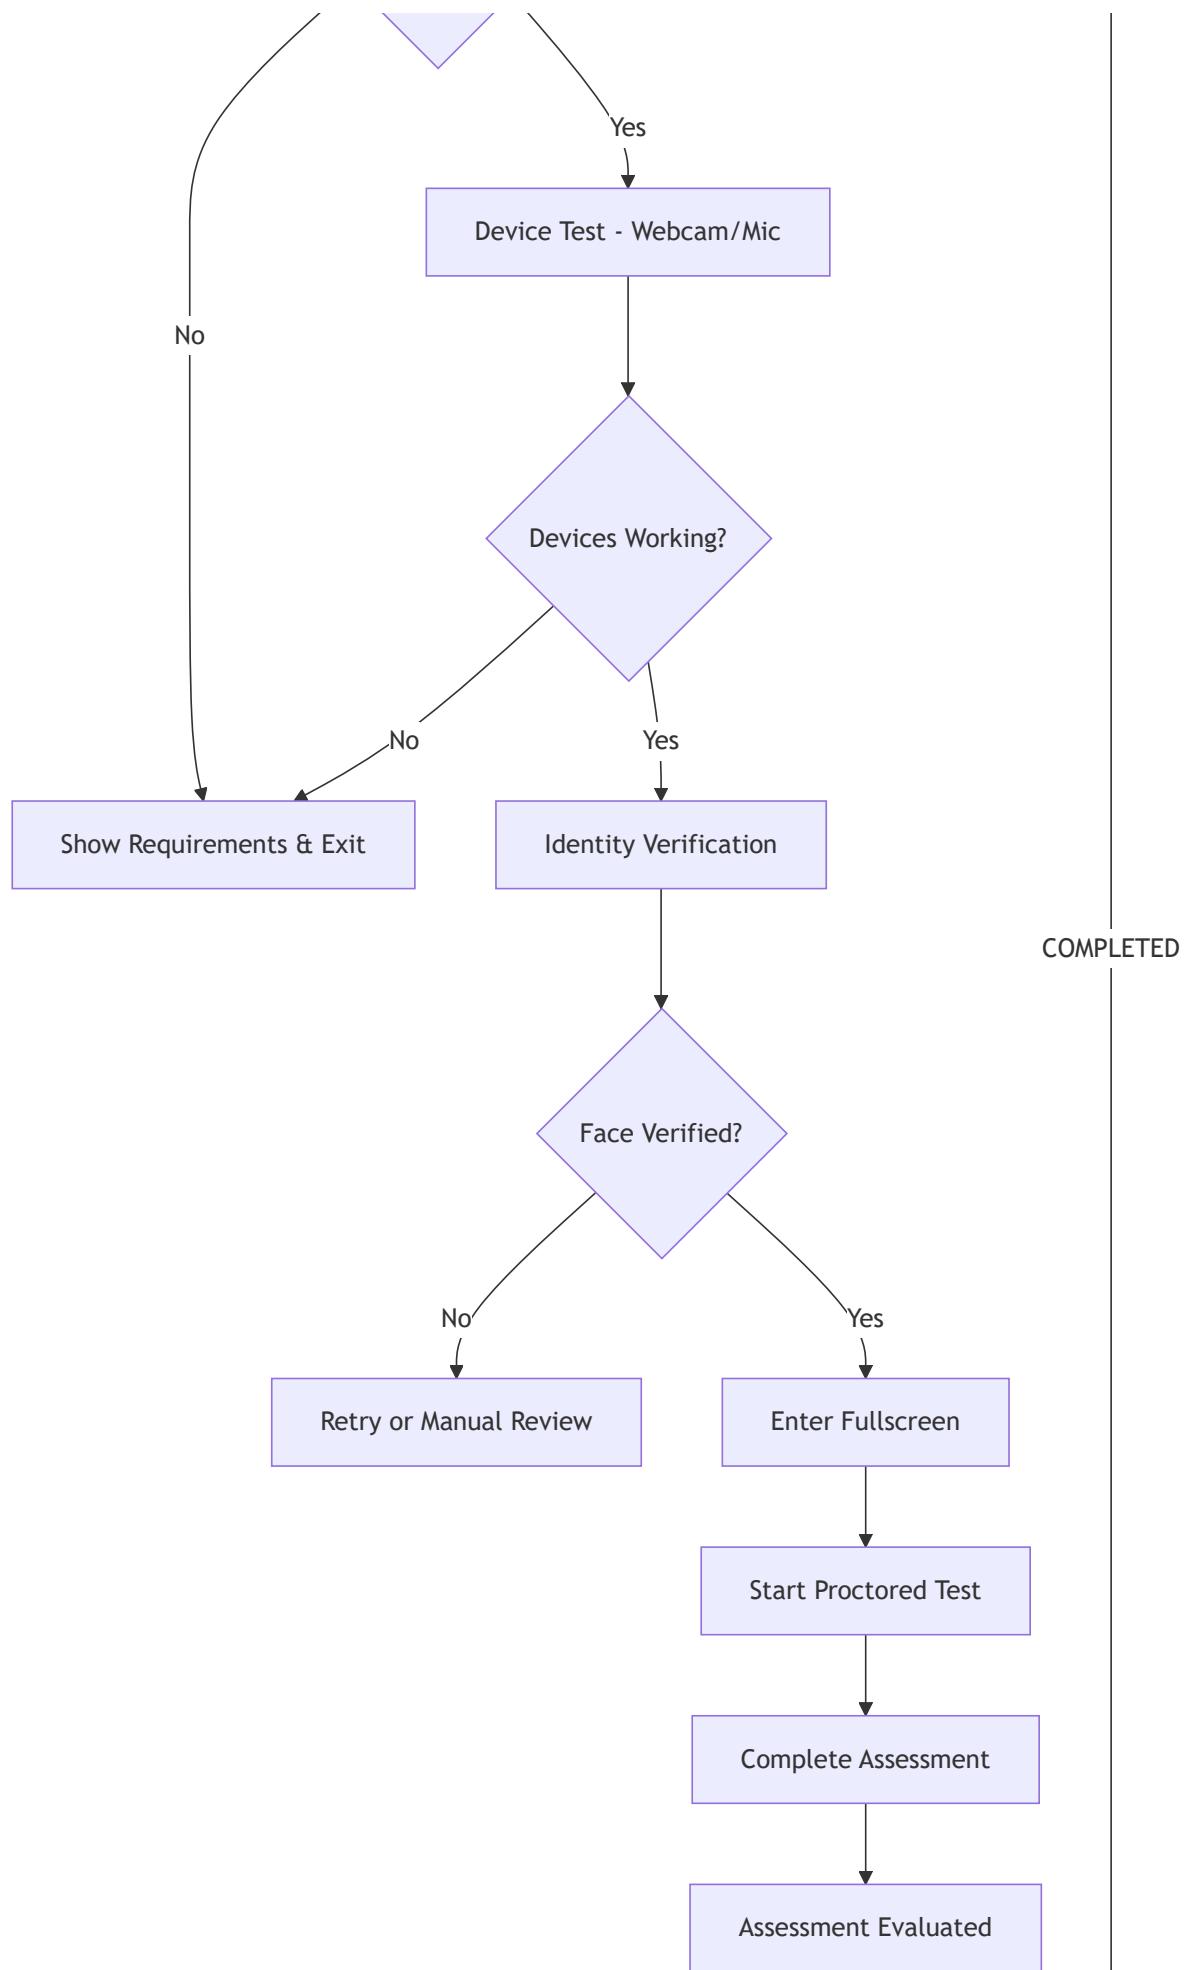

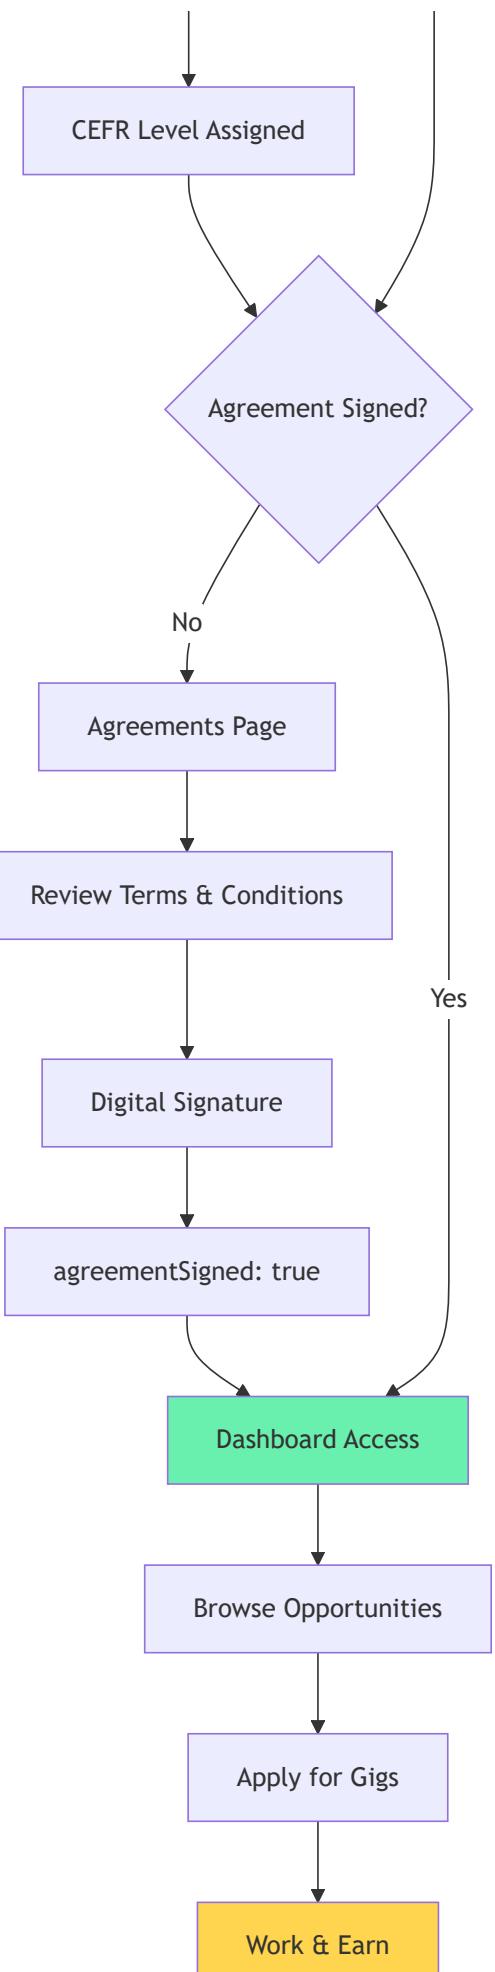

3. Agent Onboarding Flow

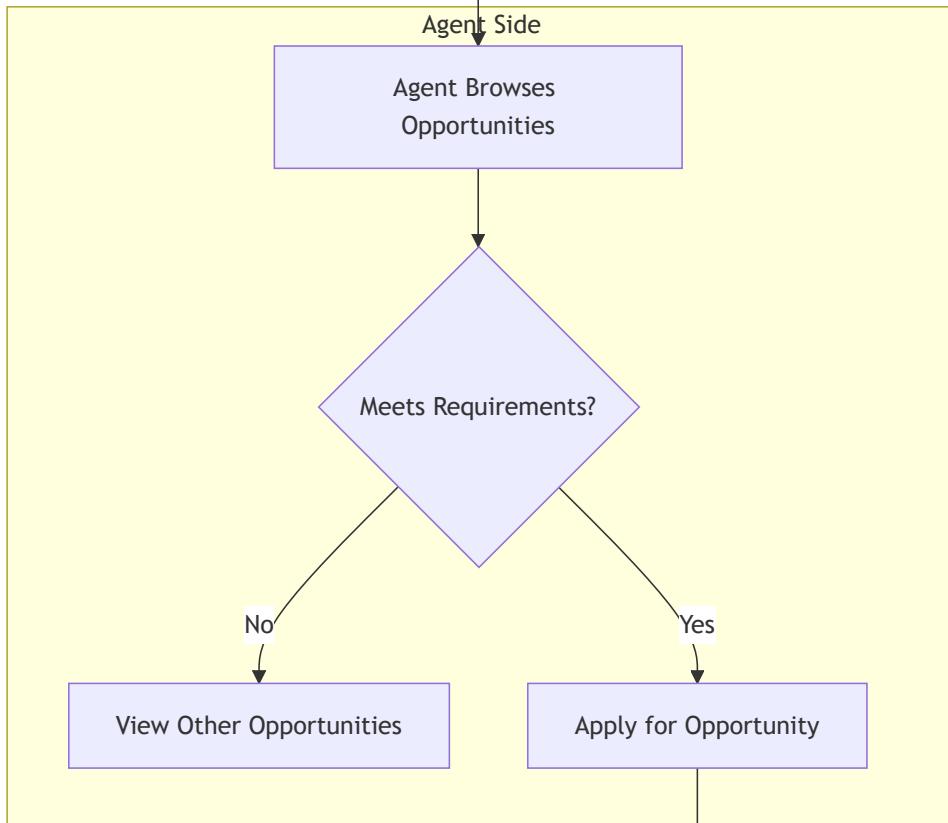

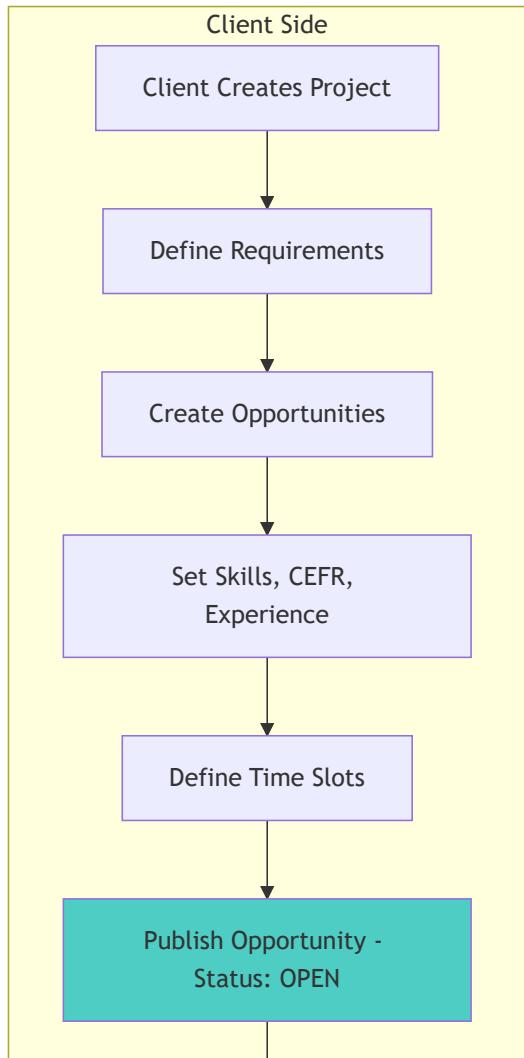

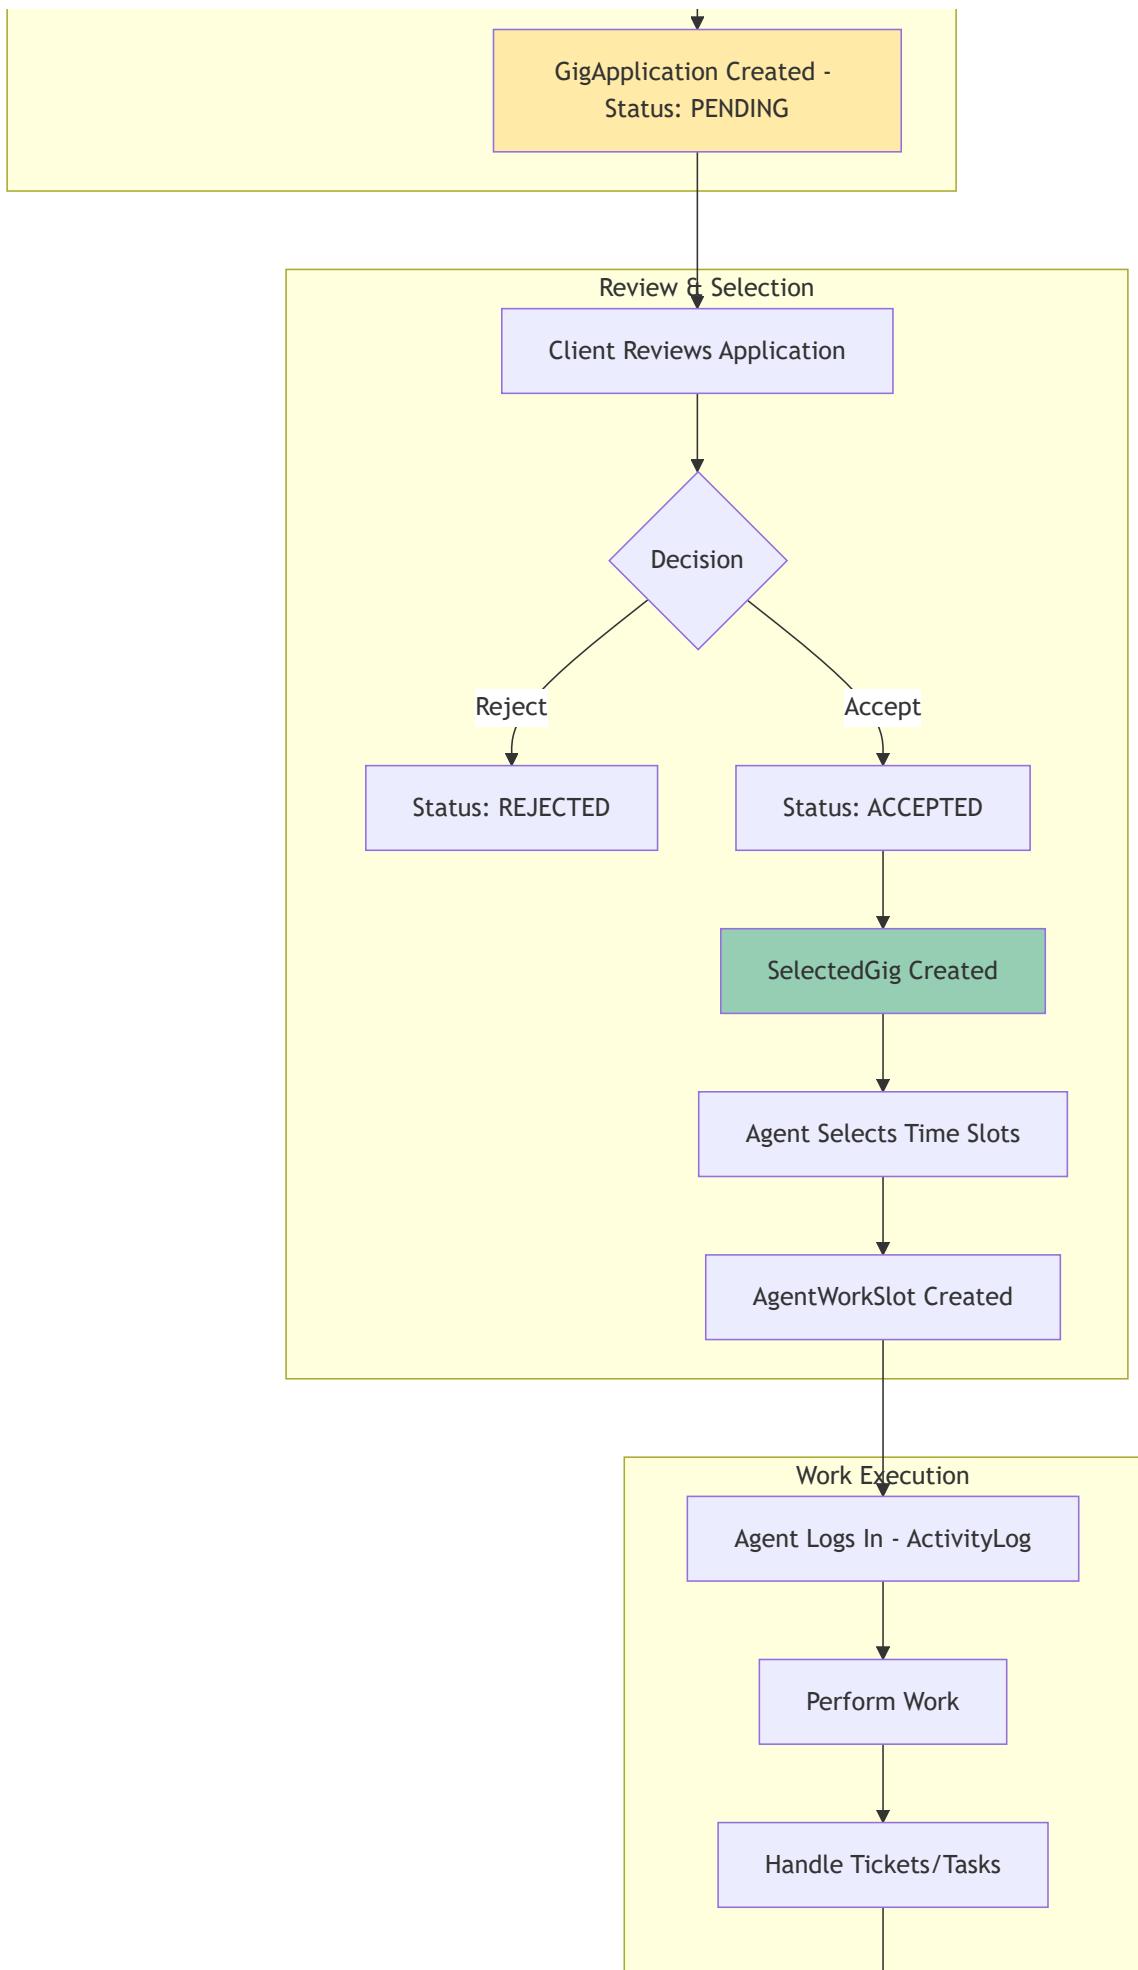

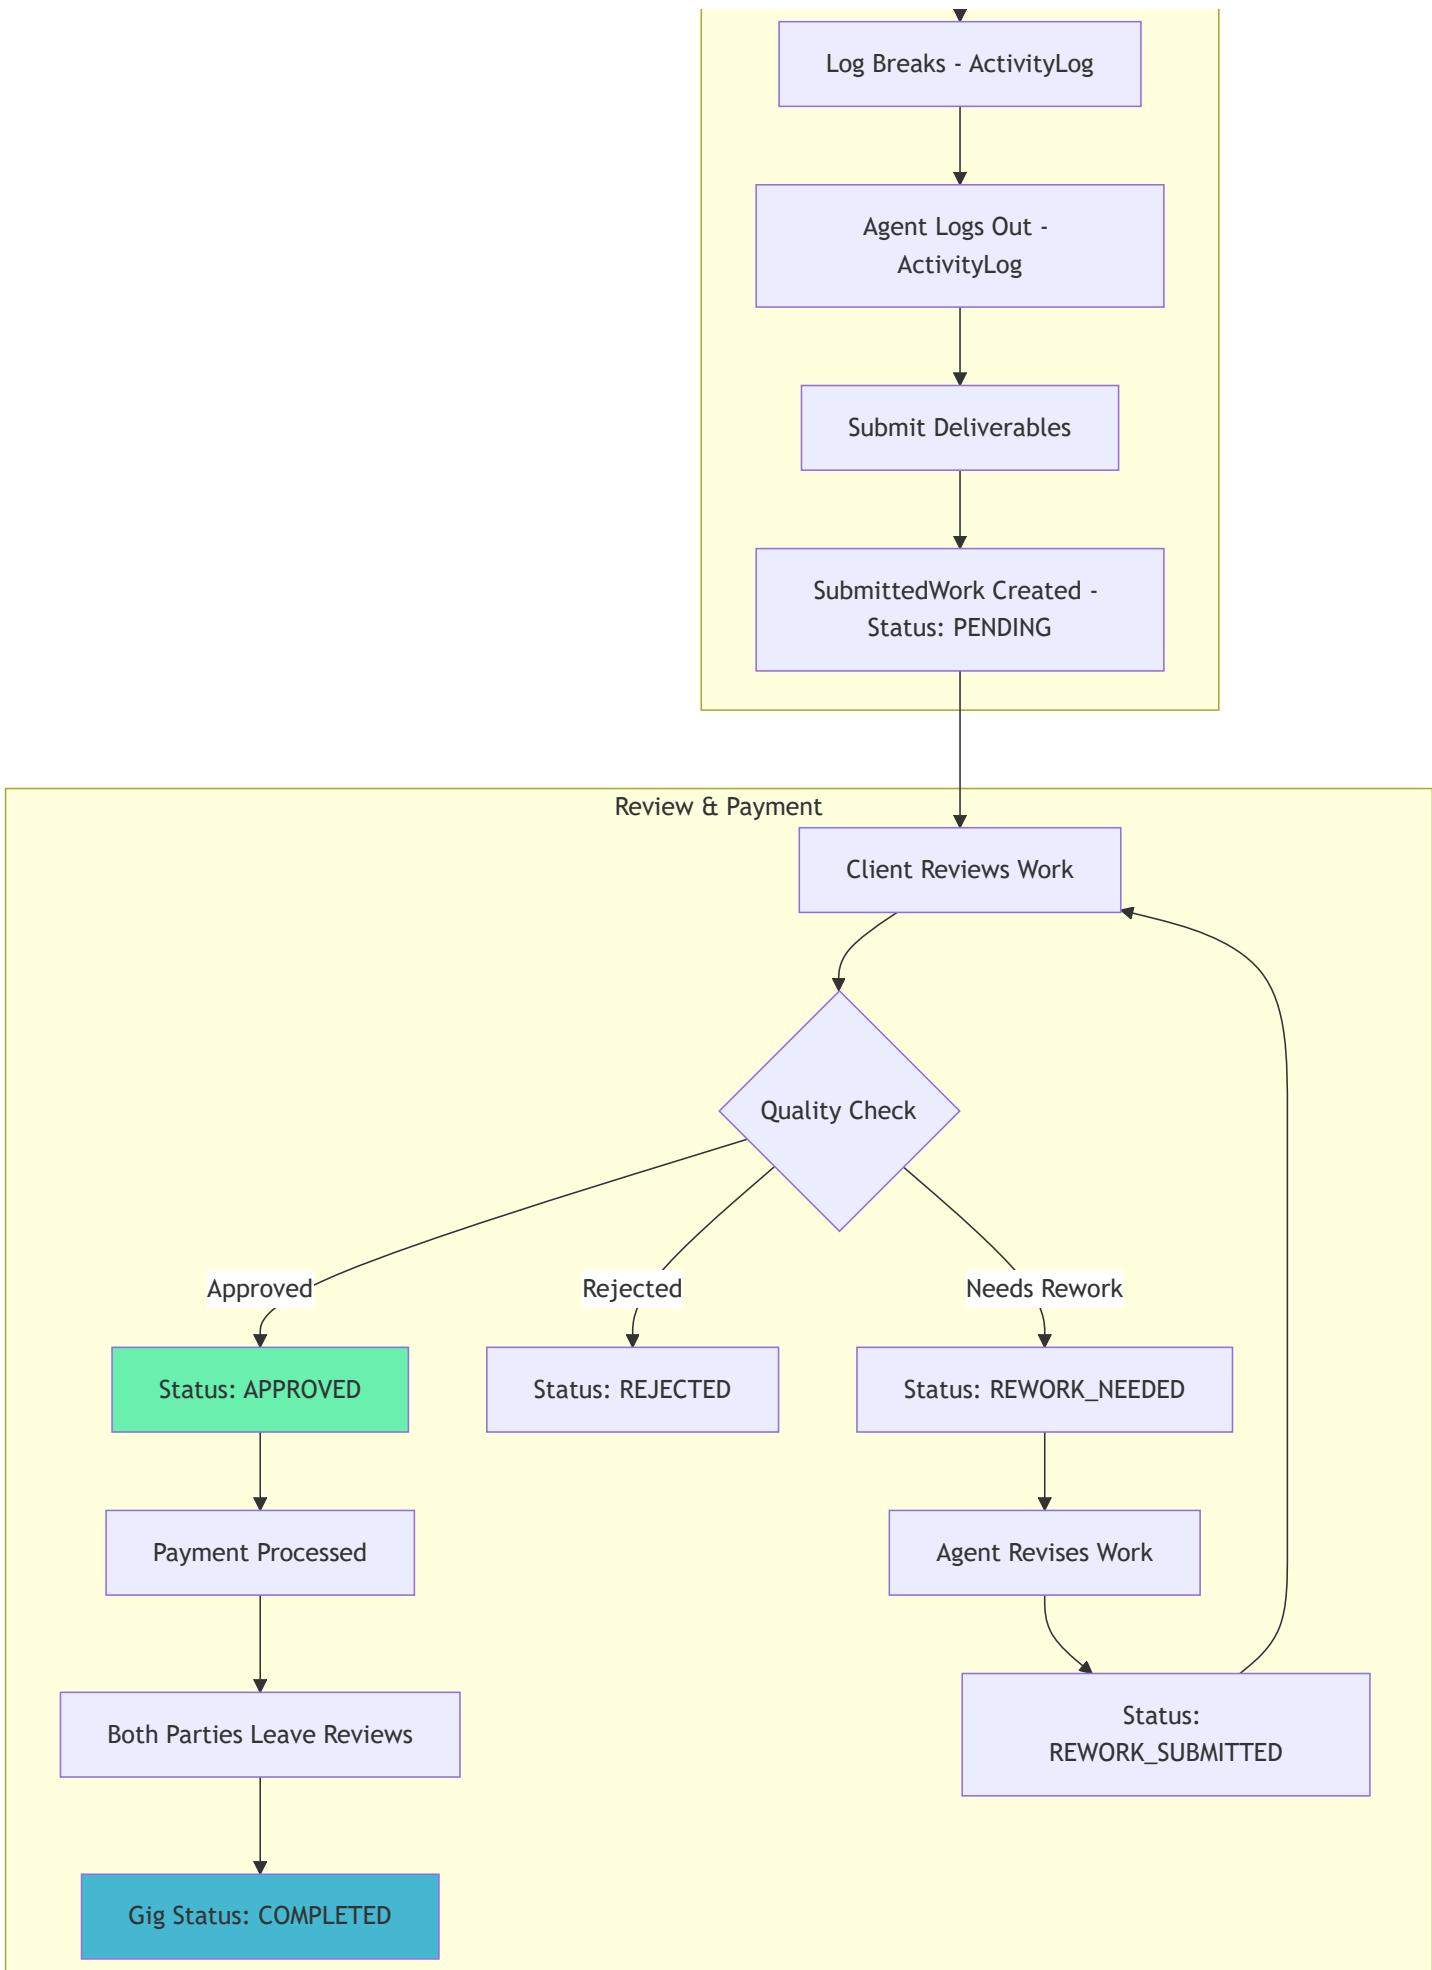

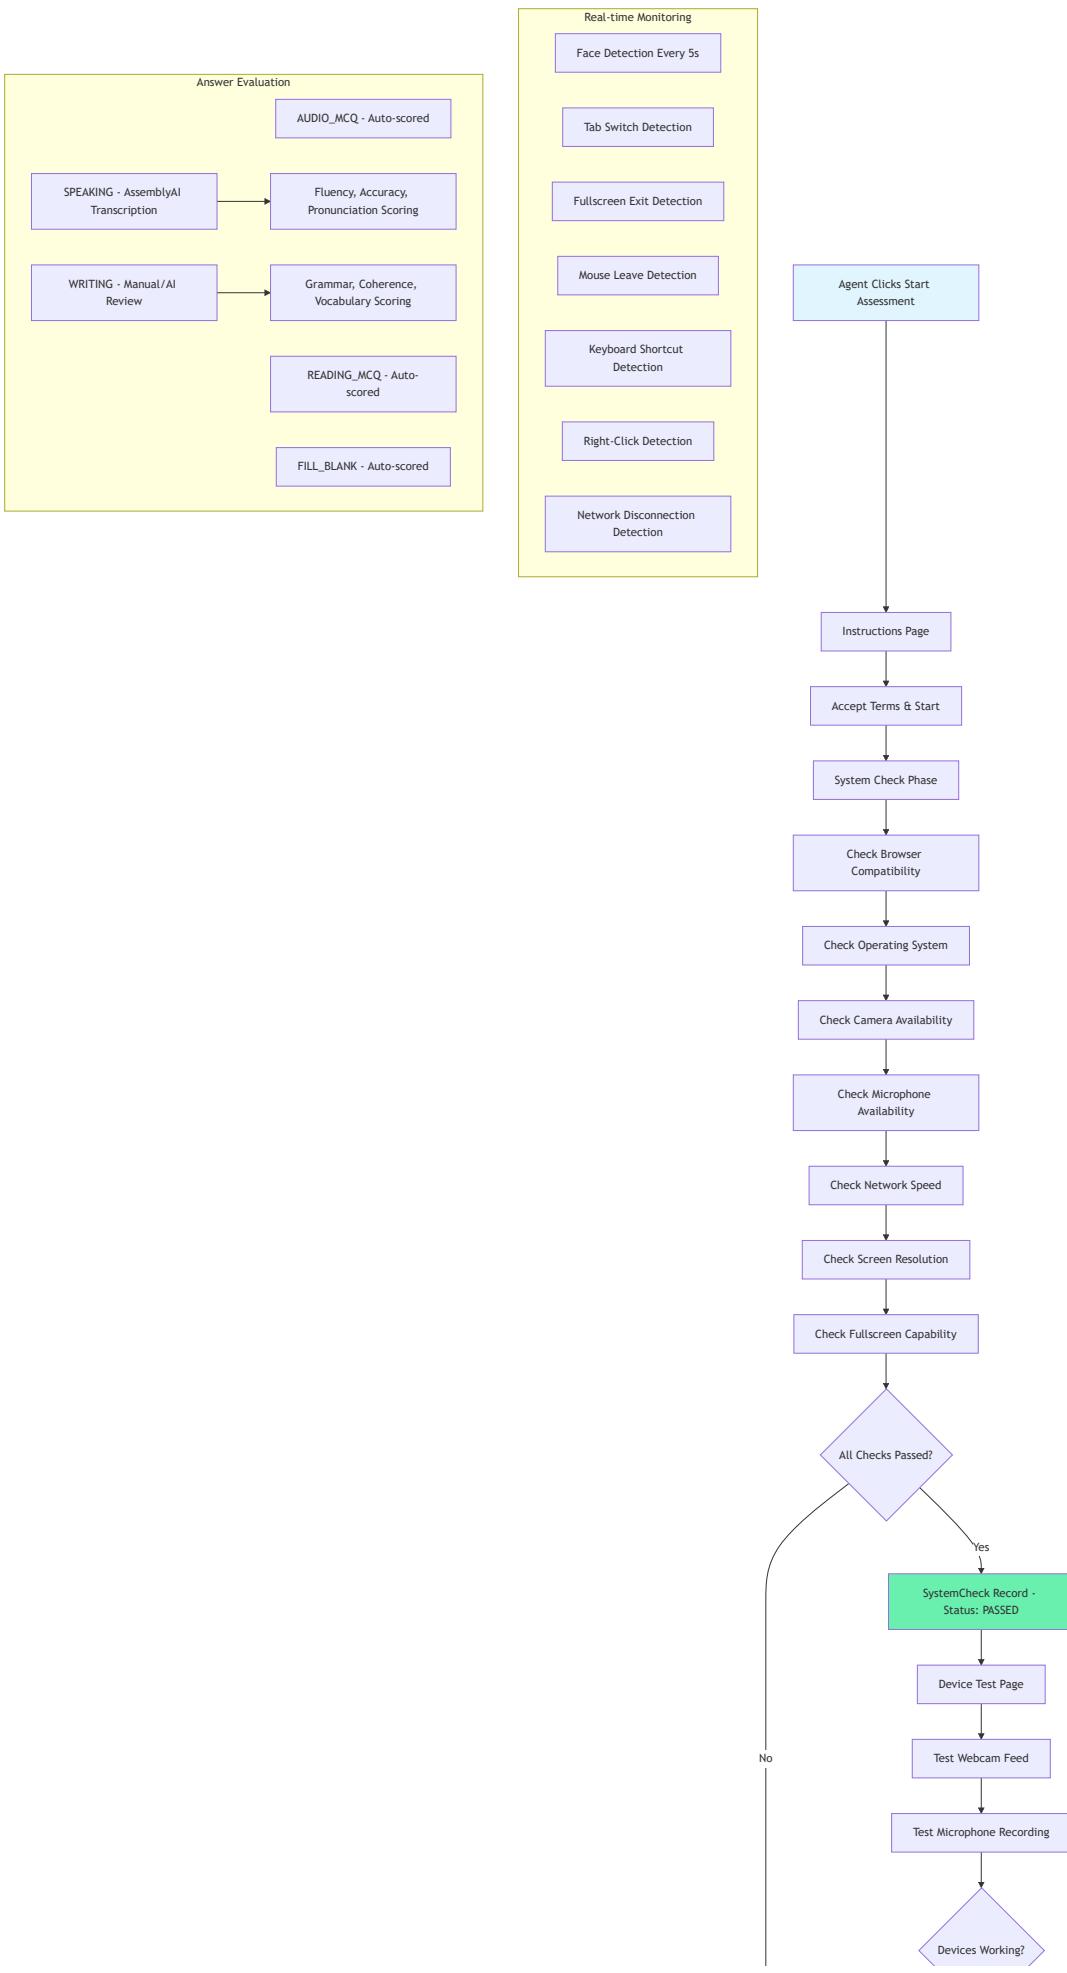

4. Opportunity Application & Gig Flow

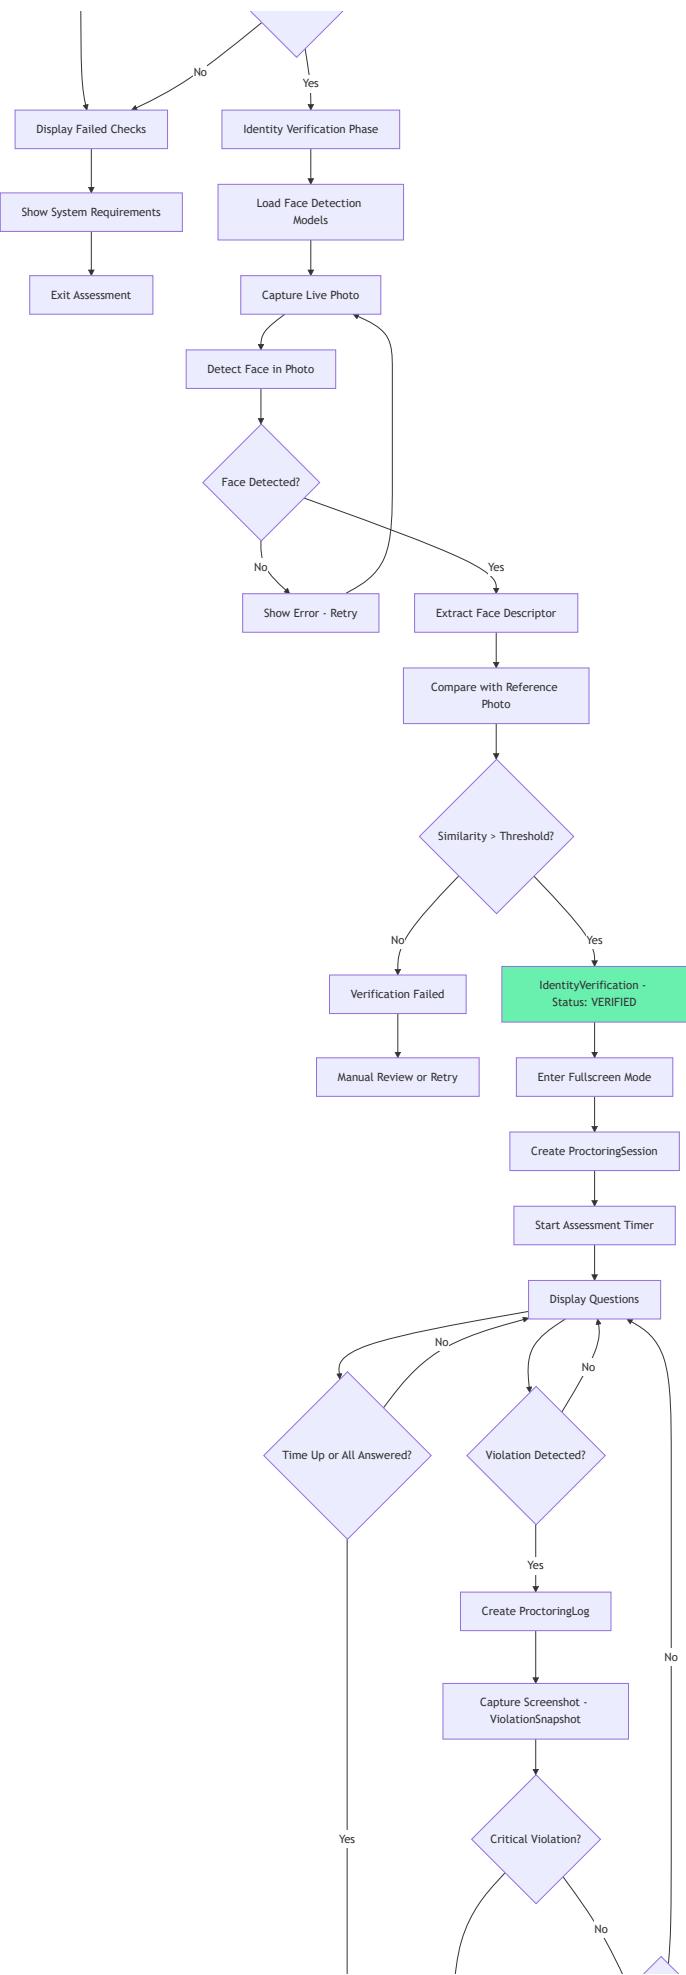

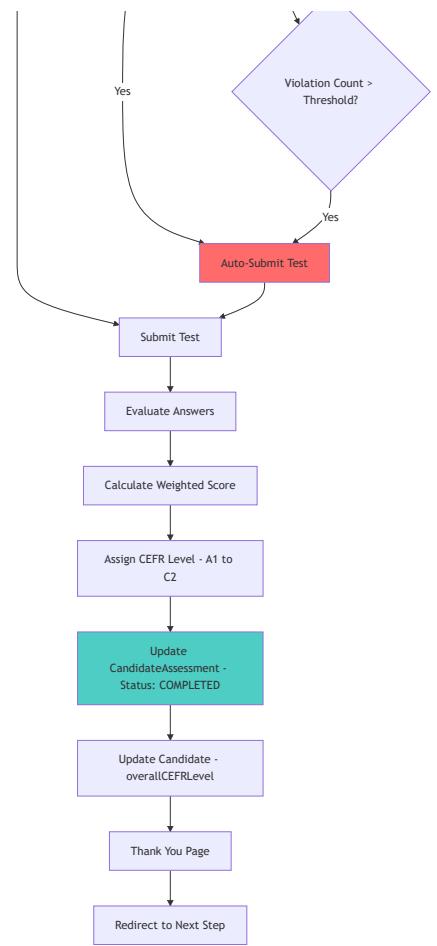

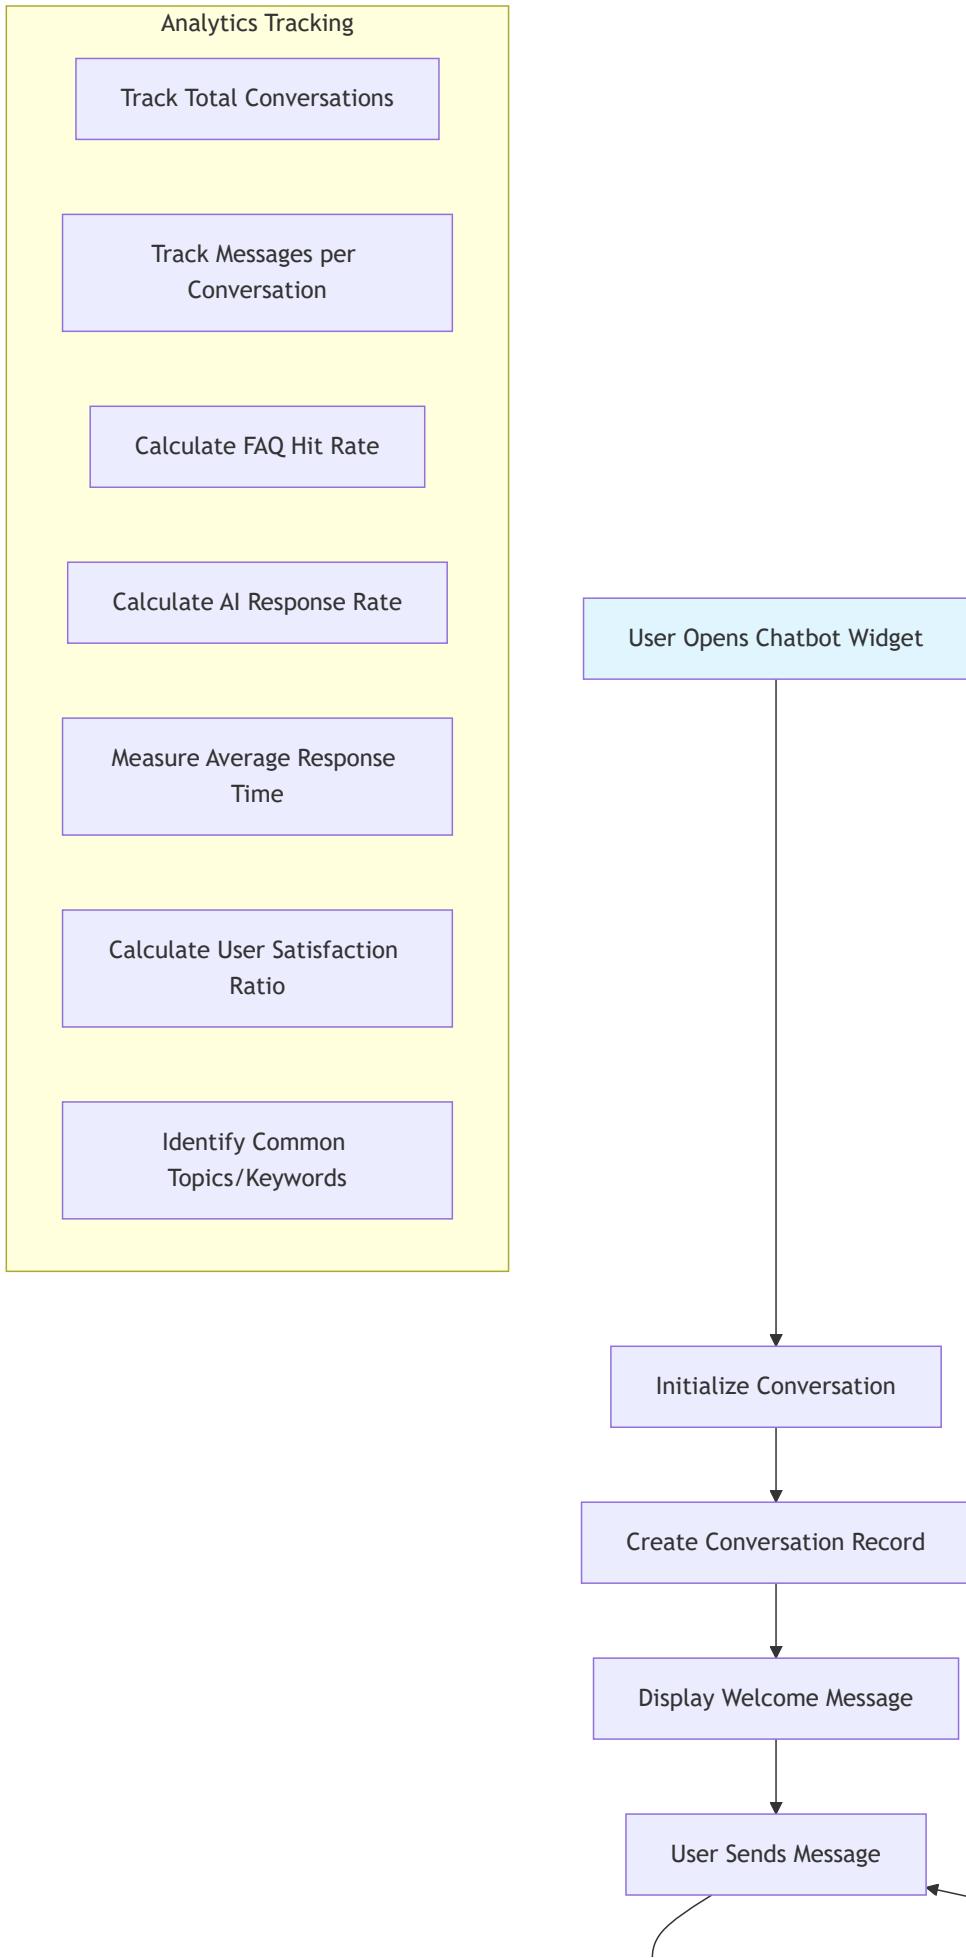

5. Proctoring & Assessment System Flow

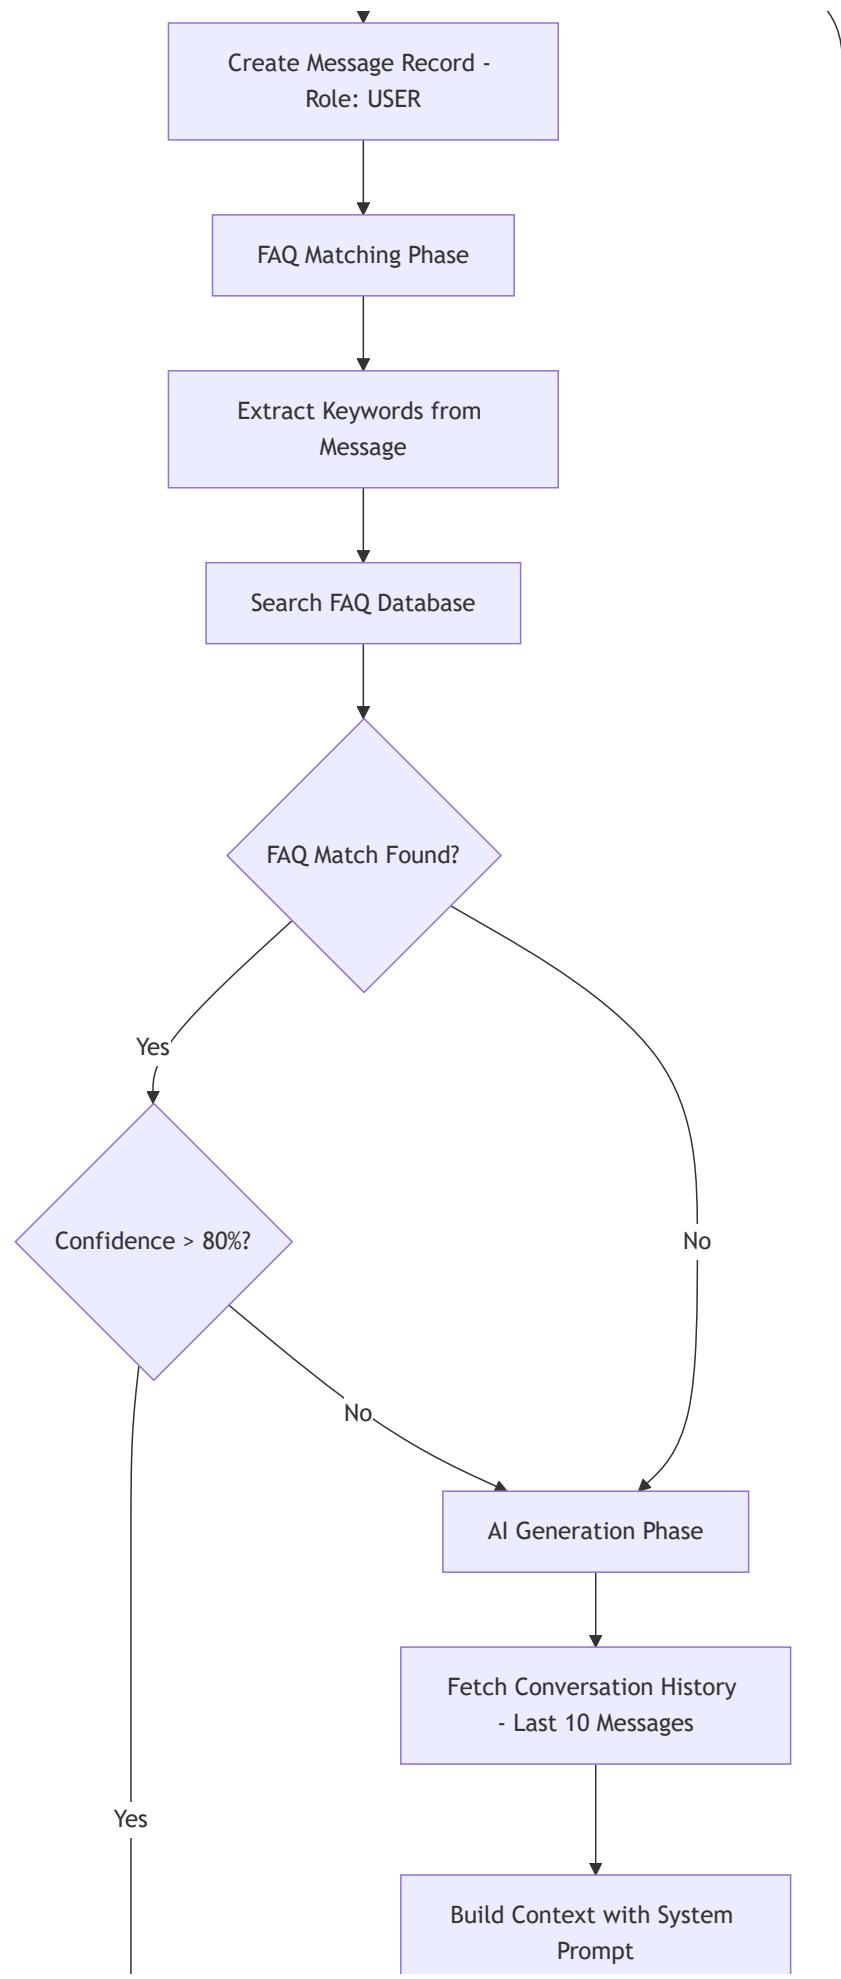

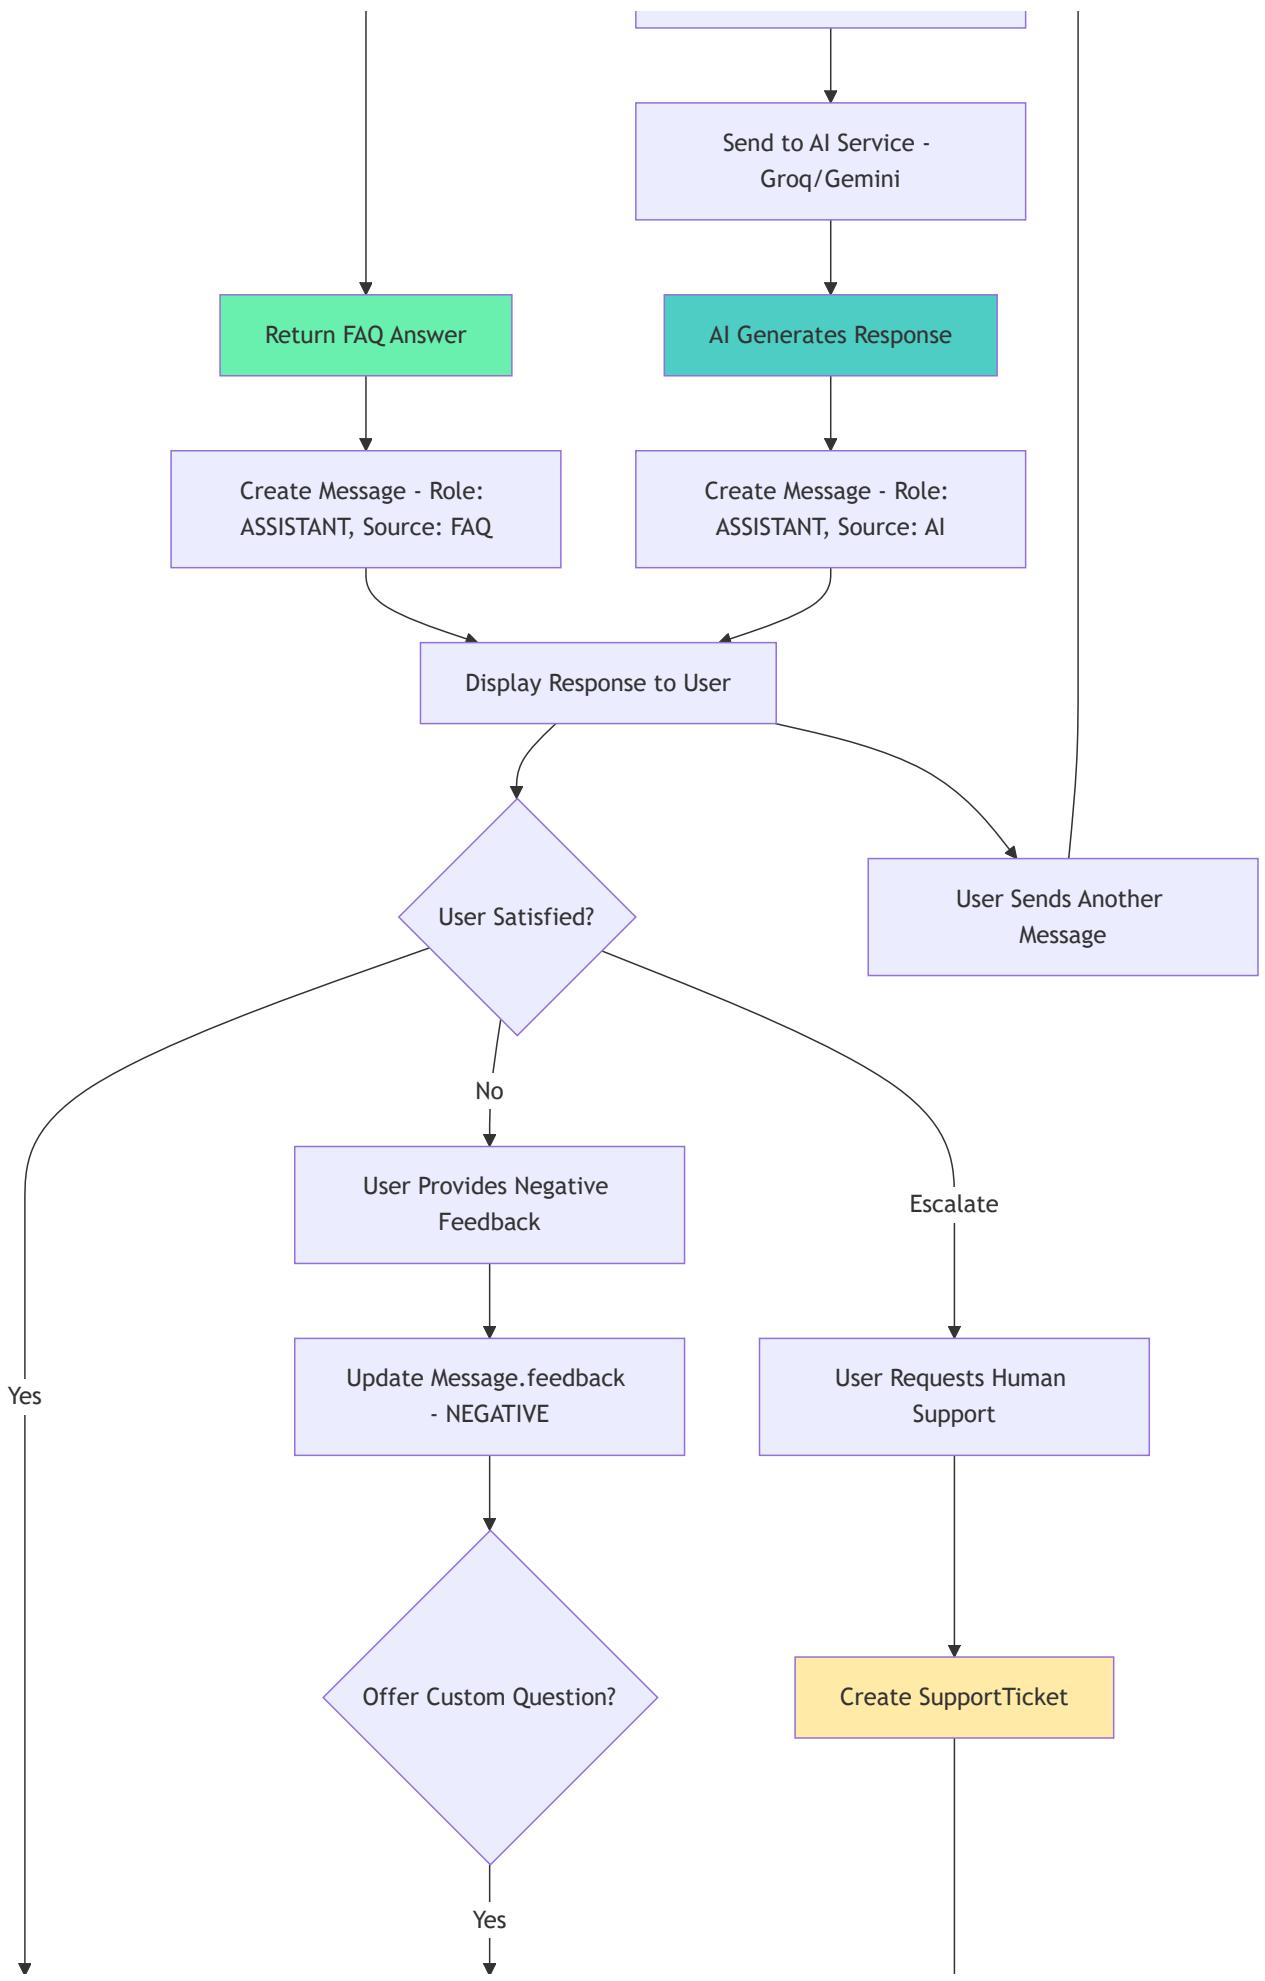

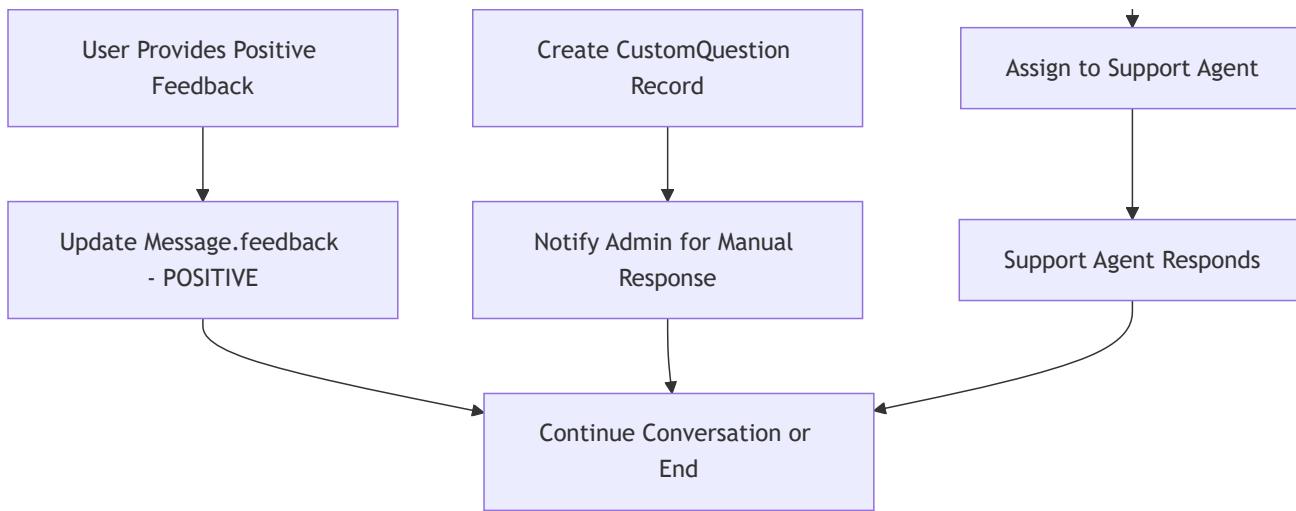

6. Chatbot System Flow

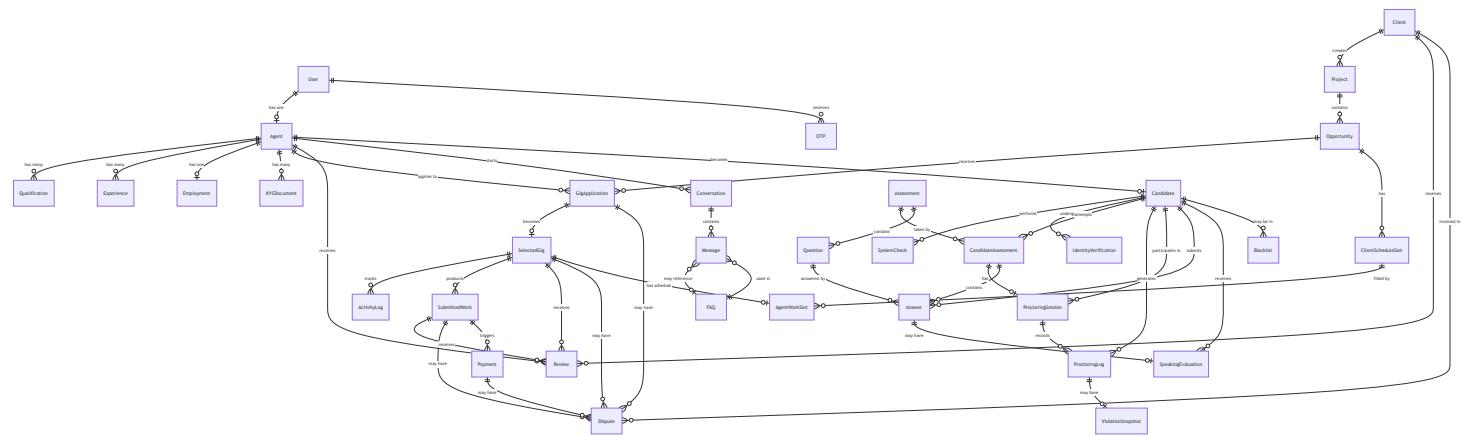

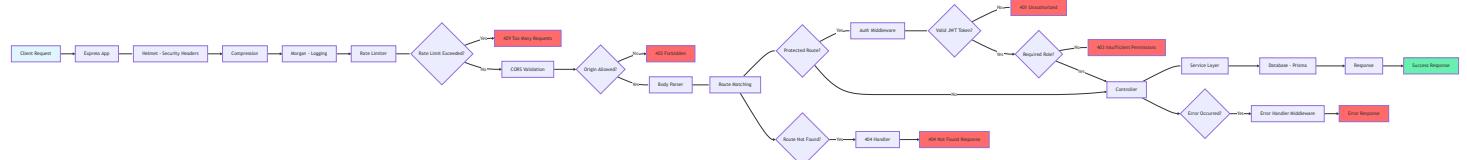

7. Database Schema Relationships

8. API Request Flow with Middleware

Summary

These flowcharts illustrate the complete backend architecture of the HitouchCX platform, including:

- 1. System Architecture:** Server initialization, Express configuration, and route organization
- 2. Authentication:** Signup and login flows with OTP verification
- 3. Agent Onboarding:** Multi-step registration process from signup to dashboard access

4. **Opportunity Management:** Application, selection, work execution, and payment flow
5. **Proctoring System:** Comprehensive assessment flow with real-time monitoring
6. **Chatbot System:** FAQ matching, AI generation, and support escalation
7. **Database Relationships:** Entity relationships across 30+ models
8. **API Request Flow:** Middleware stack and request processing pipeline

The backend is built with security, scalability, and maintainability as core principles, using modern Node.js/Express patterns with Prisma ORM for database management.
